

Ecofish Welcomes Debbi Stanyer to the Team

Ecofish is pleased to welcome Debbi Stanyer to our team.

As Project Director and Technical Lead, Debbi's expertise in environmental permitting and compliance will support the Ecofish team to continue providing effective environmental solutions. Debbi tells us that, "Having been a client of Ecofish's for many years, I experienced first-hand the dedication this team has to achieving scientific excellence while exceeding the needs of their clients. I am excited to be bringing with me experience in regulatory, environmental, stakeholder, and Indigenous affairs in the renewable energy, mining, and pulp and paper industries to better serve Ecofish's clients and communities."

Debbi has spent the past 15 years working for Evolugen, by Brookfield Renewable in Powell River. She began her journey with Evolugen as the Water Resource and Environment Manager, where she was responsible for the management of watershed systems for five hydroelectric projects in BC. Debbi quickly progressed into the role of Manager, Licensing and Compliance. This role was responsible for leading all aspects related to regulatory, environmental, public safety, dam safety, emergency preparedness, and Indigenous,

stakeholder, and community relations for all of Evolugen's renewable assets in BC, California, Arizona, and Nevada. Prior to her role at Evolugen, Debbi held environmental positions in the pulp and paper and mining industries.

Debbi holds a Bachelor of Science in Biology from the University of Victoria and a Master of Applied Science in Environmental Engineering from the University of British Columbia. She is a Registered Professional Biologist in BC as well as a Qualified Environmental Professional under the Institute of Environmental Practice in the United States.

Debbi is already a familiar face for us at Ecofish as the past Director, Treasurer and Fellow of the Association of Professional Biologists of BC from 2008-2017.

Her previous and extensive experience gives her a unique perspective and we are very excited to have her part of the Ecofish team.

Welcome Debbi!
